REMARKS

Independent claim 9 was rejected under 35 U.S.C. § 102(e) as being anticipated by Stogel. The portable device of claim 9 has a storage to store a first database with a plurality of records. The portable device also has an application stored in the storage. The application enables the device's processor to access a telephone number of a second party to an ongoing telephone call, and if a record is not found in the first database, to enable the processor to automatically initiate a search for information relating to the telephone number on a second, remotely located database, and to display the information obtained from the second database on the standalone, portable device during the ongoing call.
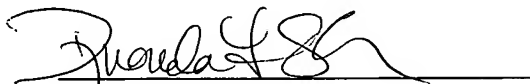

Stogel does not display information obtained from a remote database on the ATDA 100 during an ongoing telephone call. Namely, if information is missing from a local database, the ATDA 100 schedules an update after completion of a call, when a sufficient number of incomplete records or pieces of missing data are identified. *See* [0011]; [0044]. Because Stogel's ATDA 100 does not find information in a remote database during an ongoing call it cannot display information from a remote source during the ongoing call. Accordingly, Stogel does not anticipate independent claim 9 and claims dependent thereon.

Under a similar analysis, independent claim 23 and new claim 49, and their respective dependent claims are also patentably distinguished over Stogel.

CONCLUSION

In view of the amendments and remarks herein, the application is believed to be in condition for allowance. The examiner's prompt action in accordance therewith is respectfully requested. The commissioner is authorized to charge any additional fees, including extension of time fees, or credit any overpayment to Deposit Account No. 20-1504 (ITL.0694US).

Respectfully Submitted,
